

QUANTA Pre-Movers Segmentation

The UK's only predictive segmentation of home movers.

Quanta Pre-Movers Segmentation is a unique consumer segmentation optimised for home movers using the latest data science techniques. It classifies 29 million households in Great Britain into 38 descriptive segments which predicts the propensity of the population to move house.

Built from Outra's proprietary property data which includes 20 years of mortgage valuation data exclusive to Outra. Combining this data set with demographic and location features we monitor trends and changes over time. Using AI, we have created a unique view of your customers with their likelihood to move.

Each segment describes the property itself, area attributes and the household composition for both tenants and homeowners. Built at household level, this segmentation is fully GDPR compliant and instantly accessible by API or batch.

Understand the characteristics and motivations of home movers:

- predict who is most likely to move house and be in market for your product and services
- acquire new customers at a time when they are most likely to switch utility and insurance providers
- increase retail sales as consumer spend increases significantly
- communicate the right products and services with the right message to the right audience.
